

Information Science, Curriculum Development, and Scheduling Strategically

Jean-Francois Chamberland

Electrical and Computer Engineering

Texas A&M University

Background & Pertinent Experience

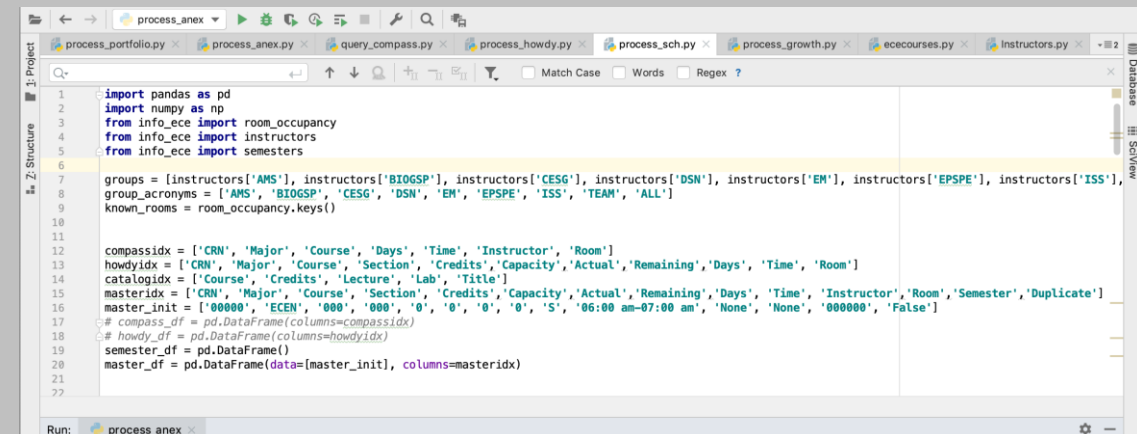

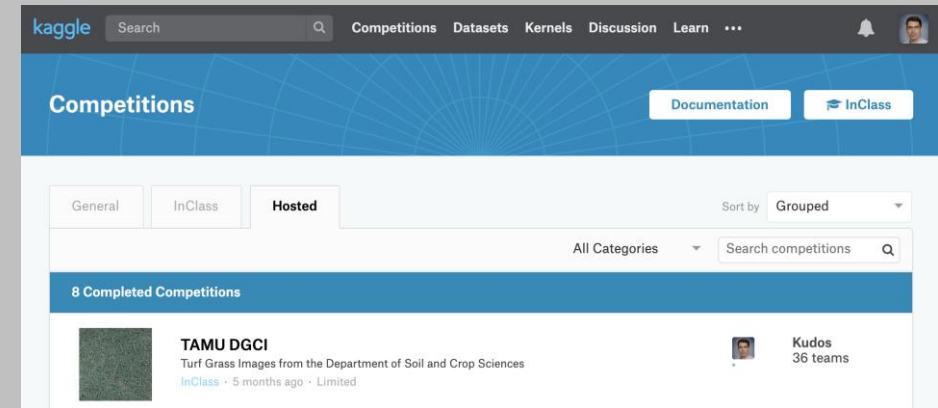

Profile

- Faculty member in Department of Electrical and Computer Engineering
- Statistical Information Processing
- Coordinated Data Science & Machine Learning group in ECE for years
- Former Associate Department Head

Tools

- Python, PyCharm, Anaconda, Kaggle
- Git, Gephi, Bokeh

Friends...

Challenge

- The task of assessing quality of **education program** is complex and requires dedicated thinking
- Such questions are prone to *substitution or heuristics*
- Information Science and Visualization can help faculty focus on right questions

Enhance Student Learning with Information Science

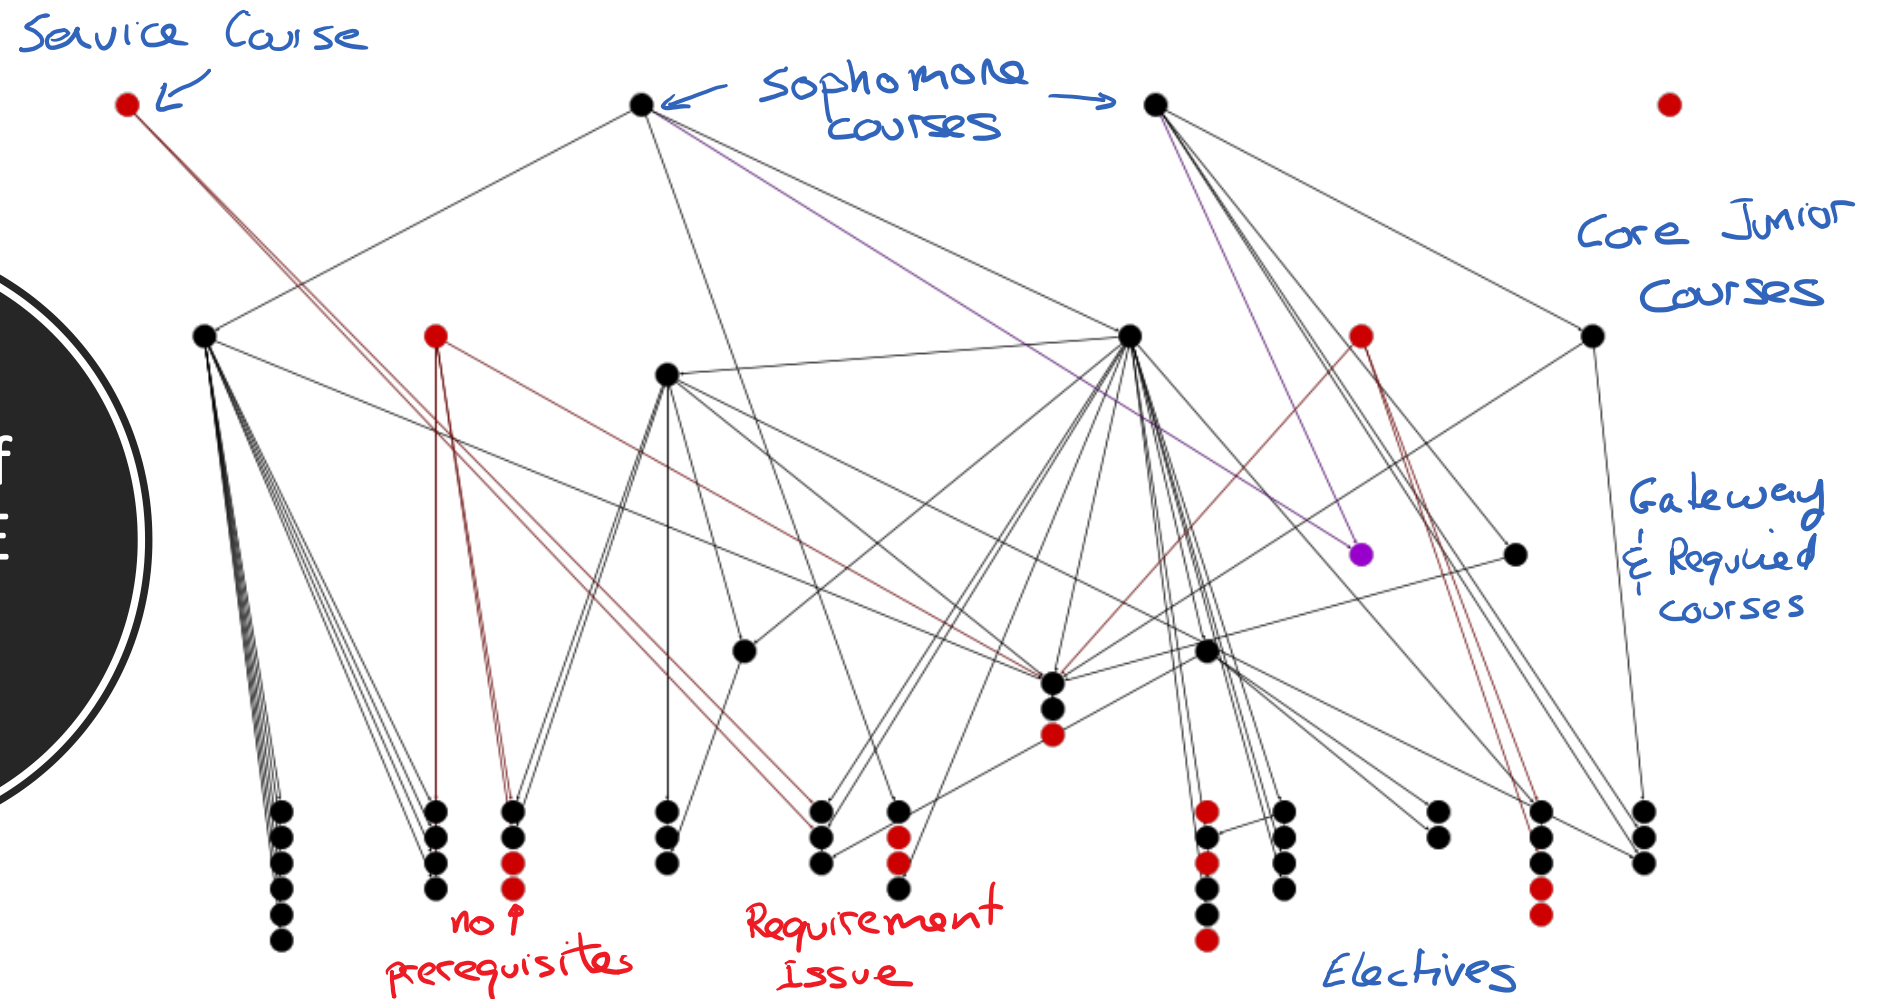

Three Examples

- Program review
- Robust scheduling
- Calibration & student behavior

Goals

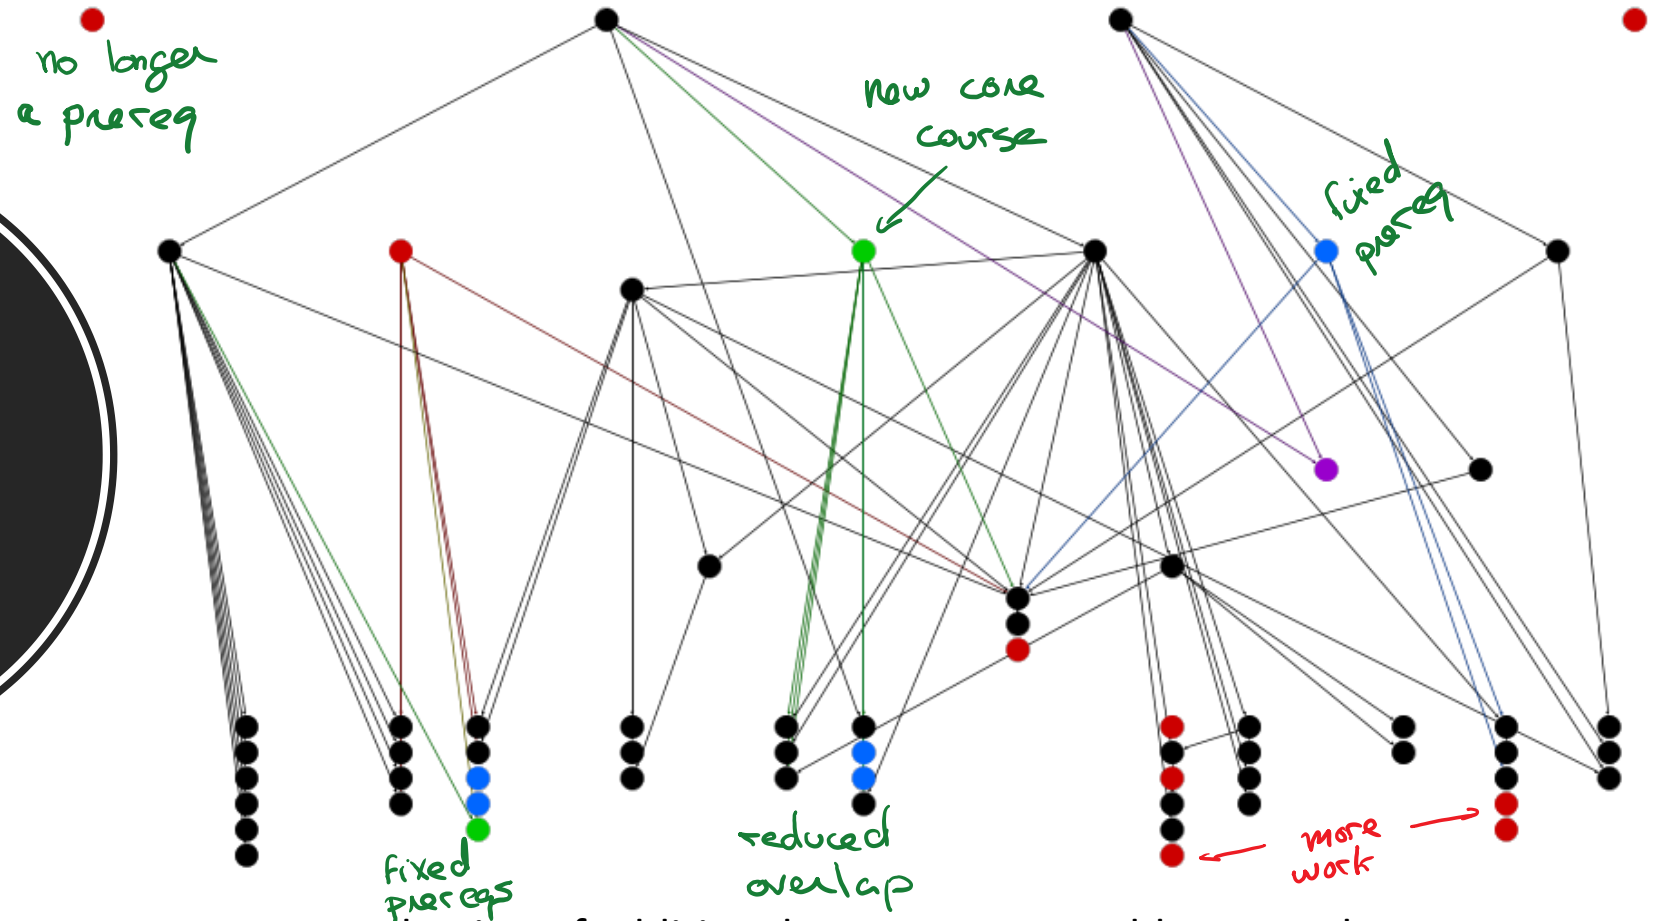

- Facilitate engagement
- Elicit thinking
- Maximize productivity

Overview of Original ECE Programs

- Several senior-level courses have no prerequisites
- Some courses require a vestigial course
- Some required gateway courses have no descendants

Overview of Updated ECE Programs

- Introduction of additional core course to address overlap
- Several prerequisites revised and added
- Change takes time...

Instructors

Electrical and Computer Engineering

- Approximately 80 Instructors
- Two undergraduate programs
- 12 required courses (reddish)
 - 55 sections
- 1 service course (purple)
 - 11 sections
- Node size based on degree
- Visualizing program robustness

Adding Robustness
to program

Few Instructors for
Required Courses

Core Courses are 1/3 of overall offering

*Not every instructor
shares the load*

Departmental Citizenship

For the ECE Department to operate fluidly, faculty members must teach a variety of courses, from core undergraduate courses to advanced graduate courses. To maintain a well-balanced offering, faculty members should strive to meet the following guidelines.

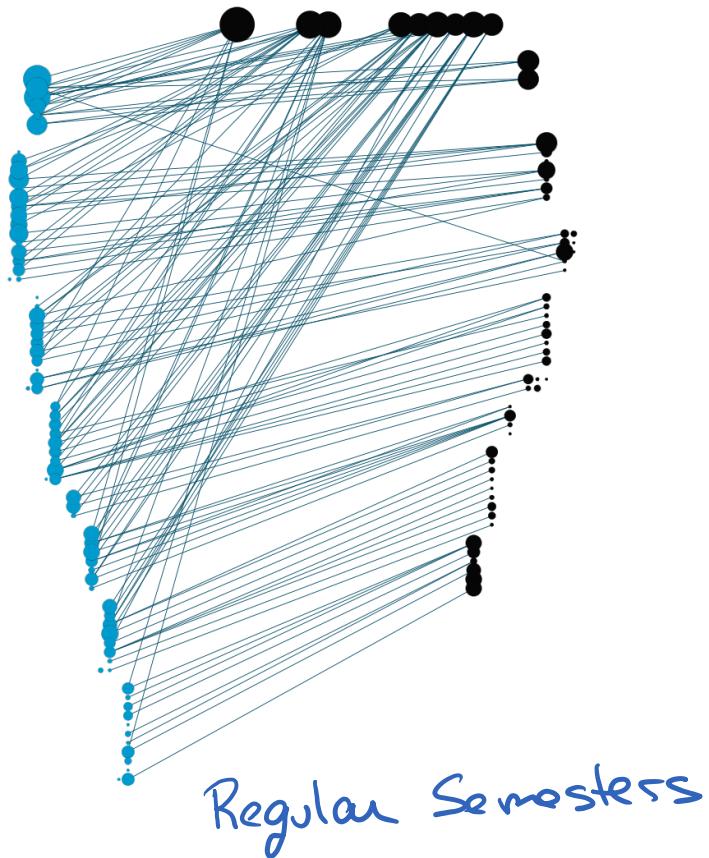

- Teaching Load – 3 courses: Teach one core course, one elective course, and one graduate course per year.

While these guidelines are not enforced individually, they are employed to determine the number of core courses that must be covered by the various groups.

Faculty members are encouraged to develop a portfolio of courses that includes at least one core course, one elective, and one graduate course. Larger portfolios greatly help the scheduling process, which can be viewed as an instance of a bipartite graph matching problem.

Teaching Flexibility and Summer Programs

Office of The Registrar

“The Grade Distribution Report represents a statistical analysis of grades given in each course and section. For courses with more than one section, the report also provides totals for all sections. Department and college totals reflect composite grade distribution.”

 - Registrant Postal Code: 77841
 - Admin Name: Ross Dixon
- Ross Dixon (LinkedIn)
 - Graduated from Texas A&M University in 2015
 - BS in Computer Science
 - Minor in Psychology

Instructor Selection Tool by GPA

- Color scheme based on GPA
 - Progression from red to blue in increasing average GPA
- Calibration of instructors
- Students shop during registration on

<https://anex.us>

- Faculty may not be attuned to Data Science and Viz Tools, but students are...

Instructors

- Average GPA varies much
- Need for calibration?
- Short changing late enrollment?

Past and Future Steps

Public Information

- Howdy/Compass
- Office of The Registrar
- Texas A&M Catalogs
- Texas A&M University Libraries
- anex.us

Possible Avenues

- Research in conjunction with Institute for Engineering Education and Innovation
- Student traces with Compass and Argos
- Student success, background assessment, traces through curriculum

The background features a complex network diagram with various colored nodes (red, orange, black, blue, cyan) and connecting lines. A dark grey trapezoidal shape is positioned on the left side, containing the text. The overall aesthetic is technical and modern.

THANK YOU!
