

The Role of Functional Aesthetics in Visual Analysis

Vidya Setlur

Tableau Research

Functional aesthetics

Functional aesthetics is the concept of combining perception, semantics, and intent to function together as a whole, creating beauty in meaningful design.

Semantic

Pictographic

Perceptual

Intentional

Talk outline

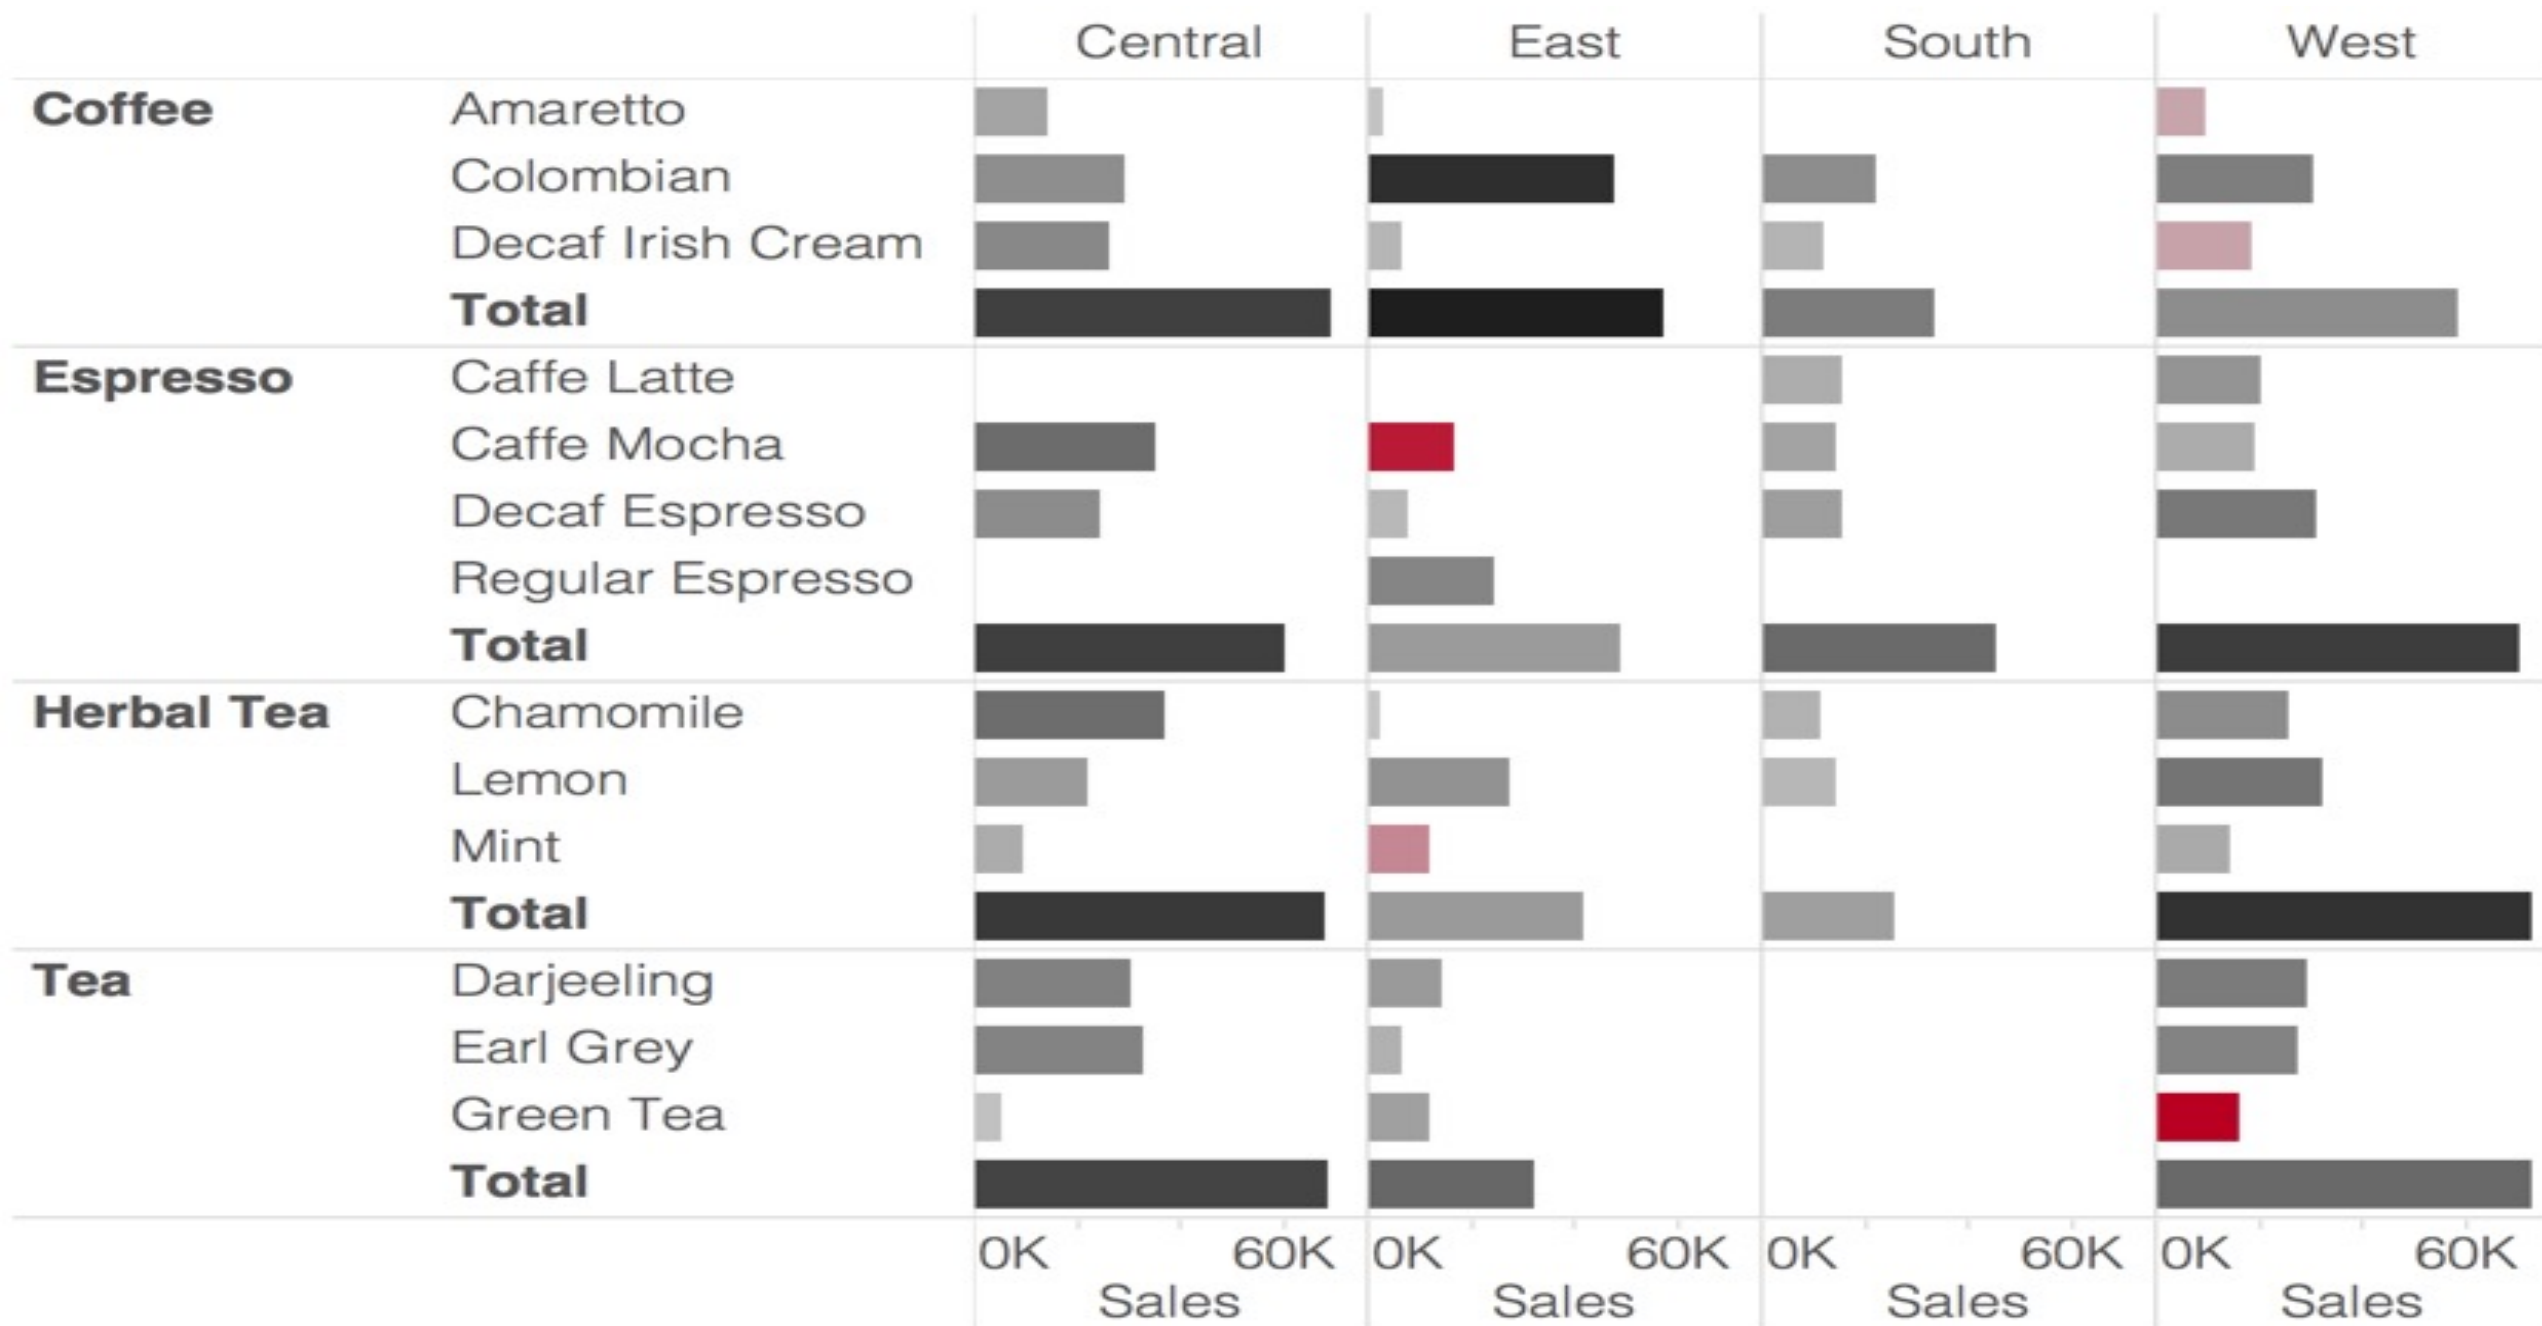

- Role of perception in seeing and understanding data
- Semantics in visual analysis
- Understanding intent
- Bringing it all together

Semantic Resizing of Charts Through Generalization: A Case Study with Line Charts, IEEE Vis 2021

Key takeaways

Representation is context, task, and data specific.

Emphasize the most important elements while still representing the view in the most faithful and recognizable way.

The level of detail in the view must outweigh the insignificance of items that are deemphasized.

Semantic sort

How is my restaurant doing?

Location semantics

Why and where are semantics important?

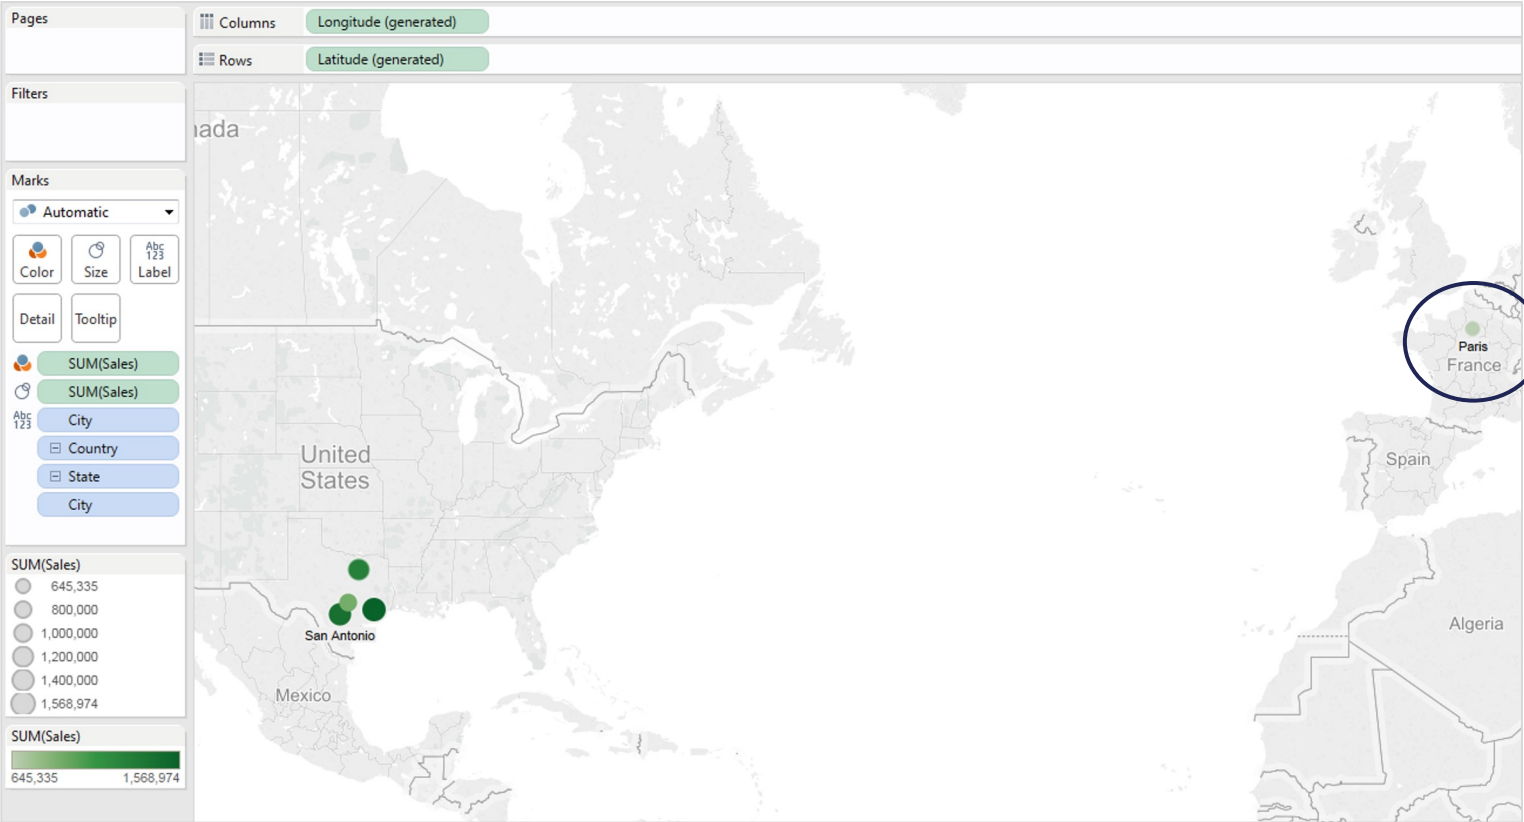

I have some sales data and need a map

City	Sales
Houston	1568974
San Antonio	1436697
Dallas	1281047
Austin	912791
Paris	645335

Location semantics

Is this what I was looking for?

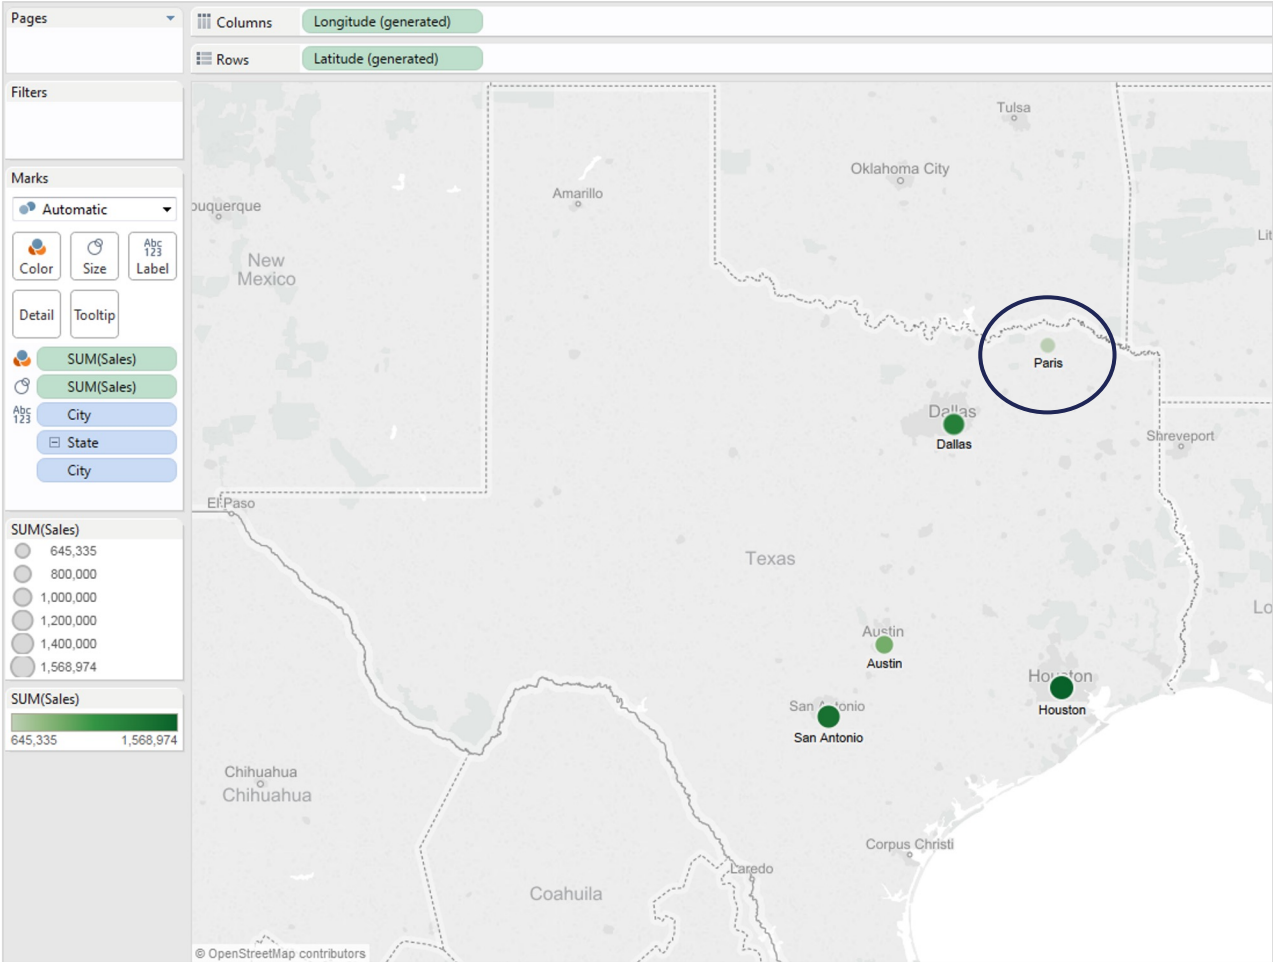

City	Sales
Houston	1568974
San Antonio	1436697
Dallas	1281047
Austin	912791
Paris	645335

Location semantics

Is this better?

City	Sales
Houston	1568974
San Antonio	1436697
Dallas	1281047
Austin	912791
Paris	645335

Data enrichment

Datetime	Price	Latitude	Longitude	area	#beds	openhouse_time
1/4/20	600000	38.8977	77.0365	5320	3	3:00 PM
...

Data enrichment

Expensive: adjective; entailing great expense; **very high priced**; costly.

Datetime	Price	Latitude	Longitude	area	#beds	openhouse_time
1/4/20	600000	38.8977	77.0365	5320	3	3:00 PM
...

Data enrichment

Large: adjective; ample in dimensions, quantity, or number.

Having much size or **extent**, capacity, scope, length, breadth etc., or relatively being of more than

Area: noun; a **measure** of the **extent** of a surface it is measured in square units.

Datetime	Price	Latitude	Longitude	area	#beds	openhouse_time
1/4/20	600000	38.8977	77.0365	5320	3	3:00 PM
...

Key takeaways

Applying semantics to data conveys recognizable meaning to make sense of it.

NLP and AI techniques bridge between the worlds of machine language and human language in the context of data analysis.

By balancing the perception and semantics, we can encourage deeper, clearer, and better conversations with the data.

Talk outline

- Role of perception in seeing and understanding data
- Semantics in visual analysis
- **Understanding intent**
- Bringing it all together

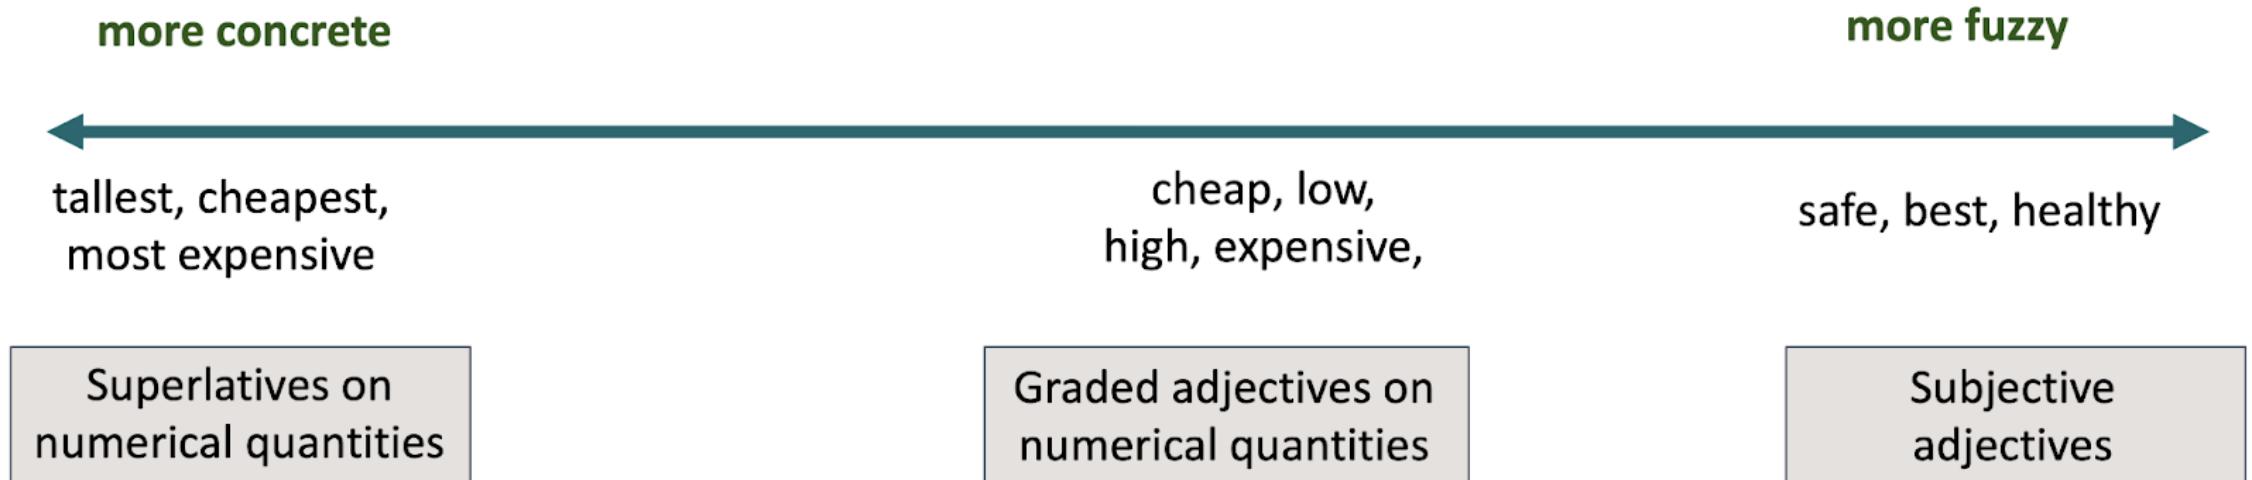

Analytical intent

The goal that a user focuses on when either performing targeted or more open-ended data exploration and discovery.

A user can express their analytical intent in a system in a variety of ways –

- Pick attributes and choose a chart type
- Expressed through natural language

Vagueness and ambiguity

Supporting an analytical conversation

“Find **large** earthquakes **near** California”

find magnitude of at least earthquakes within miles of California .

Supporting an analytical conversation

“Find large earthquakes near California”

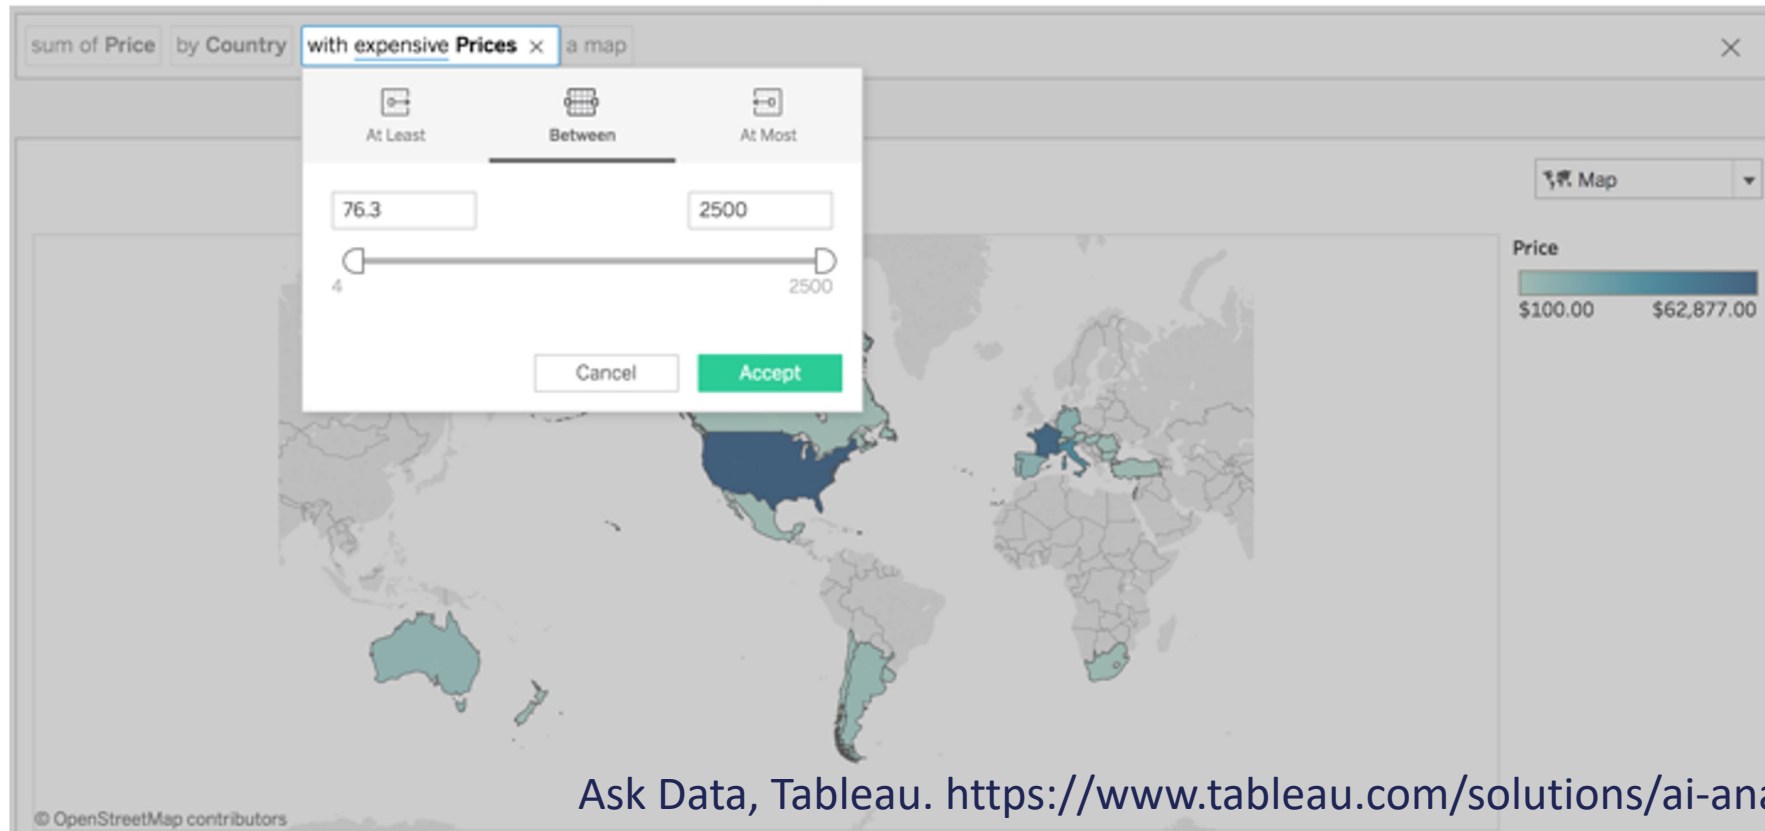

“How about near Texas”

Infer, repair, and refine

“where are the expensive wines?”

sum of **Price** by **Country** with expensive **Prices** as a map

Using external knowledge

“The medium is the message” – Marshall McLuhan

Participant
Hi @cha(t)bot

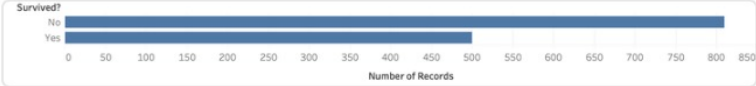

cha(t)bot APP 11:49 PM
Hi, I am an Analytical Cha(t)bot. Ask a question about the Titanic dataset

Here are the attributes in the dataset - (111 kB) ▾

Dimensions & Measures	Description and Example Values
Number of Passengers	Number of passenger records in dataset
Age	Age in years ranging from 0.17 to 80
Age (bin)	Age in 5 year bins
Class	Cabin class [1, 2, 3]
Fare	Fare ranging from \$0 to \$512.33
Fare (bin)	Fare in \$25 bins
Family aboard?	Was family was aboard or not [Yes, No]
Sex	Sex of passenger [male, female]
Survived?	Whether the passenger survived or not [Yes, No]
%survived	Computes the percent of survived passengers

Participant
show me those who survived and did not survive

cha(t)bot APP 11:50 PM
Here are the passengers who survived and did not survive -

Survived?	Number of Records
No	~300
Yes	500

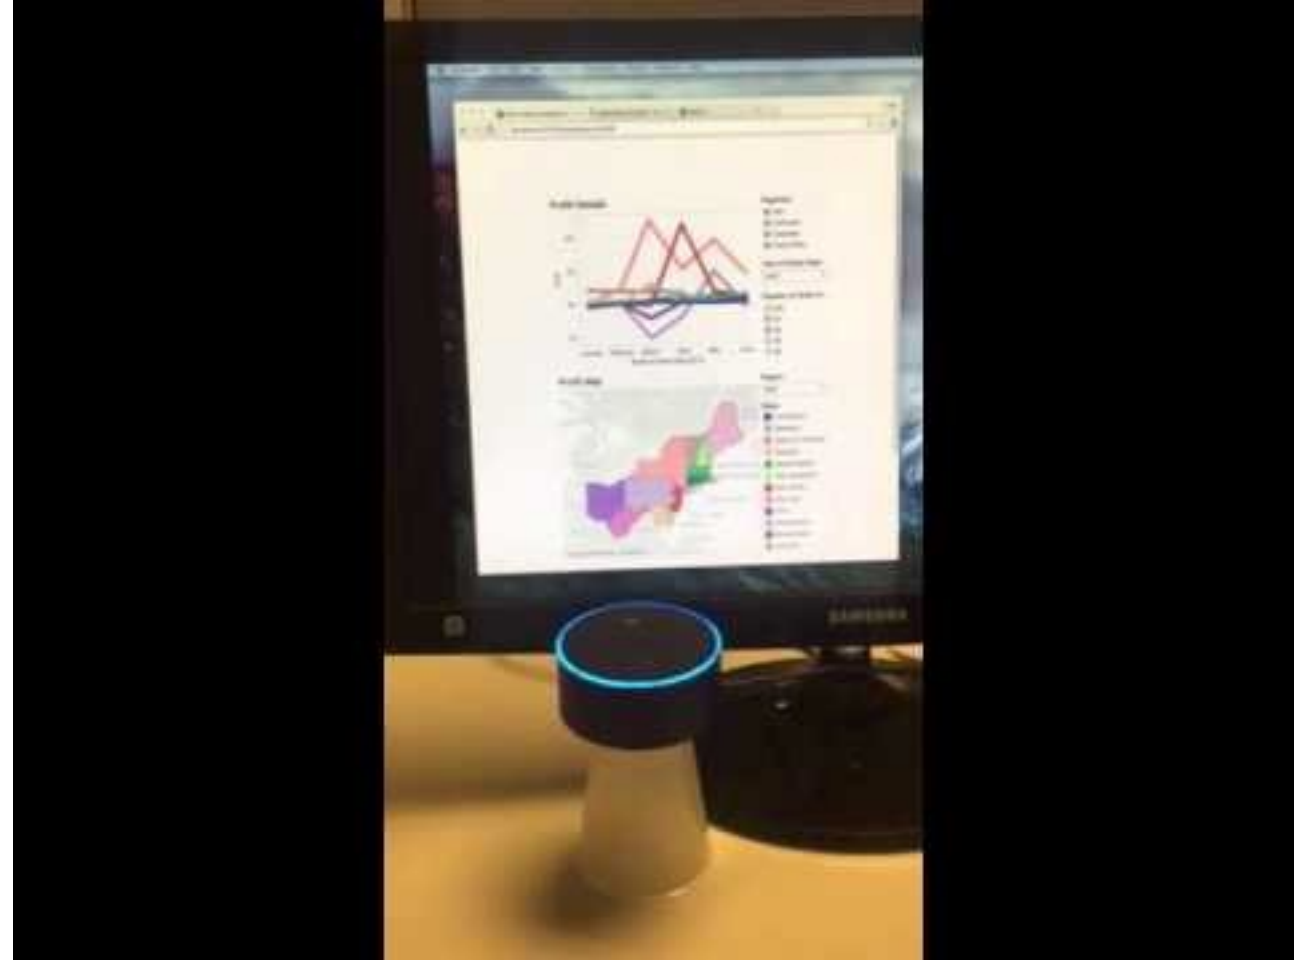

Use the options below to filter

Survived ▾

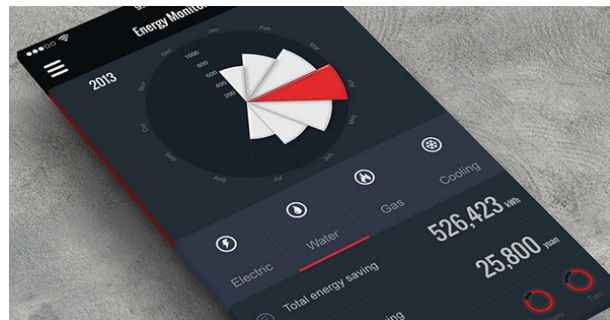

The number of passengers who survived is 500.

Analytical chatbots

“Hey Tableau, give me the summary of the day”

Touch-screen interaction

Data metrics based on natural language utterances

Key takeaways

Provide affordances for a user to understand, repair, refine, and disambiguate concepts.

Scaffolds support intent and they depend on the medium.

Pragmatics, data, and the medium need to work together to support a cooperative conversation.

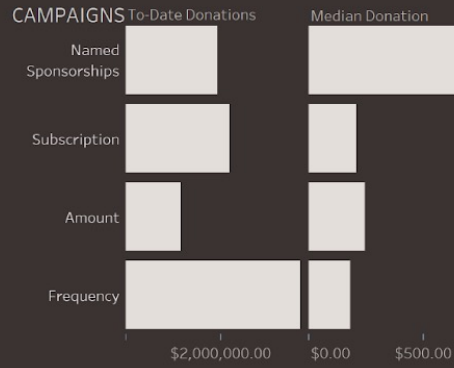

Talk outline

- Role of perception in seeing and understanding data
- Semantics in visual analysis
- Understanding intent
- Bringing it all together
